

REMARKS

Receipt of the Office Action of July 2, 2009 is gratefully acknowledged.

Claims 16 - 31 have been re-examined and finally rejected over Dreyer in view of Frick. This rejection is respectfully traversed.

Claims 16 - 31 have not been further amended as they are believed to distinguish over the Dreyer and Frick combination of references.

Request for reconsideration of the final rejection is respectfully requested in view of the following.

(1)

Claims 16 - 31 are directed to a **modular** measuring device. A modular device is one that is created independently and then used in a larger system. See the attached Wikipedia definition of Modular design.

The present invention includes a sensor module and an electronics module. Both separately designed. Dreyer does not, contrary to the view of the examiner disclose a modular design as this concept is understood. The examiner suggests that element 2 of Dreyer corresponds to a "sensor module." Dreyer refers to element 2 as a "sensor." He never refers to sensor 2 as a module. The reference number 2 refers to the entire assembly shown in Fig. 1 not to part of it, so that element 13 cannot also be a modular part of 2. The point is that Dreyer does not disclose a modular design, and referring to various parts of the assembly shown in Dreyer does not make it a modular design.

(2)

The examiner suggests that Frick discloses a straight groove, presumably element 107. But element 107 is a thread not a groove, as groove is understood. Elements 107 and 109 of Frick are in reality a threaded connection. The examiner is taking liberties with the Dreyer and Frick references which are not justified by any reasonable use of language..

The connecting elements claimed in claim 16 do not comprise a threaded connection, and to resort to a threaded connection to suggest that patentability is lacking is to stretch the understanding of a threaded connection too far. This is not what the standard or review in the USPTO in the examination process envisions.

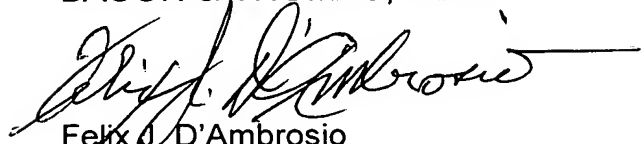

Also submitted herewith is a copy of the definition of straight and helical from Webster's New Encyclopedic Dictionary .

In view of the foregoing, the examiner is urged to reconsider his position and advance an allowance of claims 16 - 31 over the combination of Dreyer and Frick.

The examiner is also urged to contact the undersigned if further discussion of the issue is deemed necessary or desirable.

Date: August 31, 2009

Modular design

From Wikipedia, the free encyclopedia

In systems engineering, **modular design** — or "modularity in design" — is an approach that subdivides a system into smaller parts (modules) that can be independently created and then used in different systems to drive multiple functionalities. Besides reduction in cost (due to lesser customization, and less learning time), and flexibility in design, modularity offers other benefits such as augmentation (adding new solution by merely plugging in a new module), and exclusion. Examples of modular systems are cars, computers and high rise buildings. Earlier examples include looms, railroad signaling systems, telephone exchanges, pipe organs and electric power distribution systems. Computers use modularity to overcome changing customer demands and to make the manufacturing process more adaptive to change (see modular programming).^[1] Modular design is an attempt to combine the advantages of standardization (high volume normally equals low manufacturing costs) with those of customization.

A simple example of modular design in cars is the fact that, while many cars come as a basic model, paying extra will allow for "snap in" upgrades such as a more powerful engine or seasonal tyres; these do not require any change to other units of the car such as the chassis, steering or exhaust systems.

"Characterized by: (1) Functional partitioning into discrete scalable, reusable modules consisting of isolated, self-contained functional elements; (2) Rigorous use of well-defined modular interfaces, including object-oriented descriptions of module functionality; (3) Ease of change to achieve technology transparency and, to the extent possible, make use of industry standards for key interfaces."^[2]

A downside to modularity (and this depends on the extent of modularity) is that modular systems are not optimized for performance. This is usually due to the cost of putting up interfaces between modules.

Inter-modular design

Recognizing that excessive inter-module dependencies are an indicator of poor software design, a system should be intended to be loosely coupled to avoid unnecessary dependencies. Thus, inter-modular design should be easy to work with because modules can be easily understood in isolation, and changes or extensions to functionality would be easily localized.

-he-dral \hē-drāl\ *adj* combining form : having (such) a surface or (such or so many) surfaces (*dihedral*) [Greek *hedra* "seat"]

-he-dron \hē-drān\ *n* combining form, *pl* -hedrons or -he-dra \-drā\ : crystal or geometric figure having a (specified) form or number of surfaces (*rhombodron*) [Greek *hedra* "seat"]

hee-ble-jee-bles \hē-bē-'jē-bēz\ *n* *pl* : JITTERA, WILLERS [coined by Billy DeBeck, died 1942, American cartoonist]

heed \hēd\ *vb* 1 : to pay attention 2 : to concern oneself with : MIND [Old English *bēdan*]

heed *n* : ATTENTION 1, NOTICE (give *heed* to my words)

heed-ful \hēd-fəl\ *adj* : taking heed (*heedful* of the rights of others) — *heed-ful-ly* \-fə-lē\ *adv* — *heed-ful-ness* *n*

heed-less \-ləs\ *adj* : not taking heed : INATTENTIVE (*heedless* of danger) — *heed-less-ly* *adv* — *heed-less-ness* *n*

hee-haw \hē-'hō\ *n* 1 : the bray of a donkey 2 : a loud rude laugh : GUFFAW [imitative] — *hee-haw* *vt*

heel \hēl\ *n* 1 a : the back part of the human foot behind the arch and below the ankle; also : the corresponding part of a lower vertebrate b : the part of the palm of the hand nearest the wrist 2 a : a part (as of a shoe) that covers the human heel b : a solid attachment of a shoe or boot forming the back of the sole under the heel of the foot 3 : something resembling a heel in form, function, or position : as a (1) : one of the crusty ends of a loaf of bread (2) : one of the rind ends of a cheese b (1) : the after end of a ship's keel (2) : the lower end of a mast c : the base of a tuber or cutting of a plant used for propagation d : the base of a ladder 4 : a contemptible person [Old English *hēla*] — *heeled* \hēld\ *adj* — *heel-less* \hēl-ləs\ *adj* — *on the heels* of : immediately following — *to heel* 1 : close behind 2 : into agreement or into line

heel *vt* 1 : to furnish with a heel 2 : to supply especially with money (a well-*heeled* customer) 3 : to follow closely (a dog *heeling* his master) — *heel-er* *n*

heel *vb* : to tilt or cause to tilt to one side : *tip* (a boat *heeling* badly) [Old English *hieldan*]

heel *n* : a tilt to one side

heel-and-toe \hē-lən-'tō\ *adj* : marked by a stride in which the heel of one foot touches the ground before the toe of the other foot leaves it (a *heel-and-toe* walking race)

heel-tap \hēl-'tāp\ *n* 1 : a lift for the heel of a shoe 2 : a small quantity of liquor remaining (as in a glass after drinking)

heft \heft\ *n* : physical or figurative weight [derived from *heave*]

heft *vt* 1 : to heave up : HOIST 2 : to test the weight of by lifting

hefty \hef-tē\ *adj* *heft-i-er*; -est 1 : quite heavy 2 a : marked by bigness, bulk, and usually strength b : POWERFUL, MIGHTY c : impressively large : SUBSTANTIAL — *heft-i-ly* \-tē-lē\ *adv* — *heft-i-ness* \-tē-nəs\ *n*

he-gem-o-ny \hi-'jēm-ə-nē, 'hej-ə-'mō-nē\ *n* : dominant influence or authority especially of one nation over others [Greek *hēgemonia*, from *hēgēmōn* "leader", from *hēgethai* "to lead"]

he-gl-ra or **he-jl-ra** \hi-'jī-rā, 'hej-ə-rā\ *n* : a journey especially when undertaken to seek refuge away from a dangerous or undesirable environment [the *Hegra*, flight of Muhammad from Mecca in A.D. 622, from Medieval Latin, from Arabic *hijrah*, literally, "flight"]

heifer \hef-ər\ *n* : a young cow; esp : one that has not had a calf [Old English *hēahfor*]

heigh-ho \hi-'hō, 'hā\ *interj* — used typically to express boredom, weariness, or sadness or sometimes as a cry of encouragement

height \hīt, 'hīt\ *n* 1 a : the highest part : SUMMIT b : the highest or most advanced point or level (the *height* of stupidity) 2 a : the distance from the bottom to the

top of something standing upright b : the extent of elevation above a level : ALTITUDE 3 : the condition of being tall or high 4 a : an extent of land rising to a considerable degree above the surrounding country b : a high point or position [Old English *hēhtu*] □

SYN ELEVATION, ALTITUDE: HEIGHT refers to something measured vertically whether high or low (a wall 2 meters in *height*) (lettering not more than one centimeter in *height*) ELEVATION and ALTITUDE suggest reckoning of height by angular measurement or atmospheric pressure; ALTITUDE is preferable when referring to vertical distance above the surface of the earth or above sea level and ELEVATION is used especially in reference to vertical height on land (fly at an *altitude* of 10,000 meters) (Mexico City has a high *elevation*)

height-en \hīt-n\ *vb* *height-ened*; *height-en-ing* \hīt-nīng, -n-īng\ 1 a : to increase the amount or degree of : AUGMENT (*heightened* the citizens' awareness) b : to make or become brighter or more intense : DEEPEN (excitement *heightened* the pinkness of their cheeks) c : to bring out more strongly : point up (*heighten* a contrast) 2 a : to raise high or higher : ELEVATE b : to raise above the ordinary or trite **SYN** see INTENSIFY

hel-nous \hē-'nās\ *adj* : hatefully or shockingly evil : ABOMINABLE [Middle French *haineus*, from *haine* "hate", from *hair* "to hate", of Germanic origin] **SYN** see OUTRAGEOUS — *hel-nous-ly* *adv* — *hel-nous-ness* *n*

heir \hēr, 'ēr\ *n* 1 : a person who inherits or is entitled to inherit property 2 : a person who has legal claim to a title or a throne when the person holding it dies [Old French, from Latin *heres*] — *heir-ship* \-ship\ *n*

heir apparent *n*, *pl* *heirs apparent* : an heir who cannot legally be deprived of the right to succeed (as to a throne or a title)

heir-ess \ar-əs, 'er-\ *n* : a woman who is an heir; also : one who is wealthy through inheritance
